This book contains a lot of information about the lives of homeless children in America. It talks about the reason why children actually become homeless and what happens when poverty and a lack of opportunities makes these children lives terrible. It talks about the individual things homeless children go through - such as poor health conditions and drug abuse. I like the book because it goes into studies of individual peoples lives and finds out what it is that went wrong in the children's lives, why they ended up where they did and what their lives are like now. It goes into detail about the survival strategies of these children and how they compensate for their difficulties. This book also shows a very good example of the differences between regular society and that of homeless children.
