

From the Ground Up

a Utah State University student organization presents:

Landscape Frontiers

design for the new millennium

April 5th, 2001

Purpose: to make information more accessible and more usable by engaging participants in discussions with people actively involved in finding ways to live with less impact on the land. Attendees will have the opportunity to hear presentations from prominent speakers and local practitioners and learn how to apply this knowledge in the Intermountain West.

12 Speakers from around the nation, including:

Joe Donaldson, Jones & Stokes, Sacramento. "Developing Multi-use Facilities for Water Reuse, Wildlife Habitat, and Public Use"

Anthony Bauer, "Creative Mine Reclamation"

Elizabeth Gardener, Denver Water. "Landscape Water Conservation Policies"

Who should attend? Students, educators, professionals, government officials, representatives of nonprofit organizations, and members of the community who have an interest in the design and long-term success of their community and the Intermountain West region.

Last year . . . over 200 students from the College of Natural Resources, other colleges, and 70 community leaders and professionals attended the First Annual Sustainable Landscapes Conference. "From the Ground Up" raised \$8,500 to cover the cost of speakers, administration, publicity, and attendee services. The generous donation by the Natural Resources and Environmental Policy Program was used to secure and accommodate natural resource and policy speakers.

Landscape Frontiers Conference Schedule – Thursday April 5, 2001
