

Ecological Restoration of Southwest Ponderosa Pine and Pinyon-Juniper Ecosystems

Oral presentation guidelines:

Oral presentations are scheduled in 20-minute time slots. Approximately 12 minutes is suggested for the presentation, 5 minutes for questions, and a few minutes to transition between speakers. Computer projection equipment will be available. Please provide your presentation by May 1 to Pete.Fule@nau.edu. If it's necessary to bring a revised version to the meeting, use a CD-R or bring a USB drive. Please contact us in advance if you wish to use a slide projector or overhead projector.

Poster presentation guidelines:

Posters should be prepared following standard formats for a professional meeting, such as the example given below. Poster boards are 4 X 8' and posters can be installed with push pins or staples (provided). Graphics should be large so that they can be easily read from a distance of 3-4 feet. Posters sized to fit in a 4 X 4' space would be fun.

Posters will be featured on the evenings of May 11 and 12. Please plan to be with your poster during these times.

Poster guidelines from the [Ecological Society of America](#) are a helpful example:

“Posters offer an excellent opportunity for extended informal discussion and active participation by coauthors. Many experienced presenters prefer them, and we encourage you to give a poster serious consideration. Depending on how much traffic your poster is receiving, you may either speak with interested persons individually or accumulate a small group and give an impromptu mini-presentation of your poster. Most will probably do both. An especially nice feature of posters is that your co-authors can (and should if possible) be present to assist you in dealing with individual inquiries and to add depth to discussions. Posters must fit on one side of an approximately 2.4 m wide x 1.2 m tall (8 x 4 feet) poster board. Modern poster technology permits the printing of the poster as a single sheet. Persons who do this are advised to leave generous margins so that nothing will be lost if the actual dimensions of the posters are somewhat smaller than announced. Because poster boards are rented from local suppliers, at the time of writing it is impossible to guarantee precise dimensions. Pushpins, which ESA will supply, are the only method of attachment certain to work.”
